

Cognitive Project Management for AI Projects

Traditional Project Management Doesn't Work for AI.

- ▶ AI projects evolve as data evolves, success is often probabilistic—not binary—and requirements shift midstream.
- ▶ If your current methods can't keep up with your data scientists or your model timelines, it's time for a new mindset.

PMSoft's Cognitive Project Management for AI Projects

- ▶ Trains professionals to manage AI initiatives effectively, focusing on workflows, business impact, and successful outcomes—no coding required. CPMAI training equips professionals to manage AI and ML projects, coordinate with data scientists, and achieve measurable business results using the CPMAI methodology.
 - Understanding the phases for AI-specific project lifecycle planning
 - Identifying and managing AI Use Cases across patterns like Recognition, Interaction, Prediction, and Goal-Driven Systems
 - Defining what “done” means in non-deterministic AI environments

About Us

At PMSoft, we bring decades of expertise in Project, Program, and Product Management to help organizations transform the way they work. As trusted partners to the Pharma, Chemical, IT, and AI domains, we deliver tailored solutions in Training, Consultancy, and Digitalization that empower leaders and teams to achieve measurable results.
