

PgMP® Prep – Self Paced Computer Based Training

Objectives of the course:

Program Management is a structured framework for defining and implementing change within an organization. The framework covers organization, processes, outputs and ways of thinking that focus on delivering new capabilities and realizing benefits from these capabilities. The new capabilities may be services, service improvements, working practices or products that are developed and delivered by projects. The PgMP® certification from the Project Management Institute is one of the premiere certifications that benchmarks the capabilities of a Program Manager.

One of the difficulties that a PgMP® aspirant faces is that being a niche certification, there aren't a lot of colleagues who are seeking the certification, nor are a lot of classes or boot camps that help them. This self-paced module helps the PgMP® aspirants get the necessary knowledge and direction to lead their own efforts. It has proven to be an invaluable aid to many participants looking to embark on this challenging journey.

Duration and Structure of the course:

- Online Access to the course material on PMSoft's proprietary E-learning portal for 180 days

Online Courseware Provided:

1. 14 screencasts explaining the concepts in the Standard for Program Management – Fourth Edition, Project Management Institute Inc., 2017.
2. Online Reading Material
3. Course material for download
